On the cover: Model 403B(D) sequential batch-dump weighing system is shown during a customer demo at the supplier's materials testing facilities. System volumetrically feeds individual ingredients to preset batch weights into a scale-mounted weigh hopper. System incorporates a high resolution non-load-cell weighing mechanism that is permanently calibrated and adjustment-free, unaffected by in-plant vibrations, and the system includes the supplier's proprietary Batch-Lok algorithm for disturbance-free operation.
